Technical Skills

- **Languages & Concepts:** TypeScript, JavaScript, Python, Go, Dart, SQL, PHP, C/C++, HTML, CSS, OOP
- **Frontend & Mobile:** React, Next.js, React Native (Expo), Flutter, TanStack Query, Redux, Zustand, Tailwind CSS
- **Backend:** Node.js, Express, NestJS, Gin, FastAPI, REST APIs, Webhooks, JWT, Redis, BullMQ, Asynq
- **Databases & ORMs:** PostgreSQL, Supabase, MySQL, MongoDB, Drizzle ORM, TypeORM, GORM, pgvector
- **AI & LLM:** Claude (Anthropic API), OpenAI API, Google Gemini, LangChain, pandas
- **Payments & Integrations:** bKash, SSLCommerz, Nagad, aamarPay, Firebase (FCM), Resend, SMS gateways
- **DevOps, Cloud & Testing:** Git, GitHub Actions (CI/CD), Docker, AWS, GCP, Vercel, Expo EAS, Sentry, Jest, Vitest, Playwright, Jira, Agile, Figma

Experience

Full Stack Software Engineer (Level 1) – Cookspace Technologies Limited — Jun 2026 – Present

Product studio; parent company of Kindred, MatchBD and Munchies.

- **Kindred** (behavioural-science dating app): largest code contributor across the mobile app, API and admin. Built a **React Native (Expo)** app with 50+ screens, a **NestJS** API with 150+ **REST** endpoints on **Drizzle ORM** and **PostgreSQL**, and a **Next.js** admin dashboard with 30+ pages.
- Integrated an **AI** compatibility engine (**Python/FastAPI** microservice using **LangChain**, **Claude/OpenAI** and **pgvector**) with **BullMQ** workers for push (**FCM**) and email (**Resend**), backed by 1,400+ **Jest** unit and integration tests. Shipped to an Android closed beta via **Expo EAS**.
- **MatchBD** (matrimony app, live on Google Play): core contributor to the **NestJS/TypeORM** API, **Expo** app and **Next.js** admin. Features include swipe matchmaking, NID and selfie verification, realtime chat, **SSLCommerz/Nagad** payments with reconciliation, and **Gemini**-generated bios.
- **Munchies** (food-delivery platform rebuild): wrote the idempotent **Python/pandas** ETL migrating legacy **MongoDB** data into **Supabase PostgreSQL**. Co-developed the new **Go** (**Gin**, **GORM**, **Asynq/Redis**) backend, with **bKash**, **SSLCommerz** and **aamarPay** payments.
- Co-built the multi-tenant **React/TypeScript** operations dashboard. Moved the **Flutter** rider and customer apps onto the new API, **Supabase Realtime** and **FCM/APNs** push.

Junior Software Engineer – Stealth Intelligence, LLC — Dec 2025 – May 2026

- Contributed to backend services, internal APIs and automation scripts across 3+ services using **Node.js** and **Python** in a remote, distributed team.
- Debugged production issues and profiled performance bottlenecks, reducing recurring incident frequency by ~25–30% and cutting mean time-to-resolution on tracked bugs.
- Collaborated with senior engineers on system design, code reviews (~15+ per month) and incremental refactoring of core components.

Junior Full Stack Engineer – Munchies Deliveries Ltd. — Apr 2024 – Dec 2025

- Developed and maintained customer-facing and internal tools using **React.js**, **Node.js** and **PostgreSQL**, supporting ~500+ daily orders and 10K+ monthly active customers on live production traffic.
- Designed and implemented 20+ **REST APIs** for order management, authentication and third-party integrations spanning 3 payment providers, SMS/email notifications and 2+ logistics partners.
- Optimised **SQL** queries and added targeted indexes, reducing p95 query latency by ~40–50% and key API response times from ~800 ms to under 250 ms.
- Built automation scripts for data cleanup, scheduled reporting and operational dashboards, eliminating ~10 hours per week of manual work.

Projects

Vent Sports – Sports Jersey E-commerce – *Next.js, TypeScript, Supabase* — ventsports.shop

- Built a **Next.js (App Router)** store with checkout, delivery zones, coupons, COD/advance payments and stock validation; 100+ SKUs and 200+ orders per month at launch.
- Added an admin panel (orders, POS, analytics), courier APIs and fraud rules that cut fake COD orders by ~30%.

SymptoSeek – AI Medical Assistant and IoT Monitor – *Python, Node.js, React, MongoDB, ESP32* — GitHub

- Built **Python** ML services predicting 40+ conditions with risk scores, plus doctor-matching and booking **APIs**.
- Built an **ESP32-S3** fall-detection and vital-signs device that sends emergency alerts over **Telegram** and SMS.

Education

BSc in Computer Science and Engineering – United International University — Jan 2020 – Oct 2025

- **Coursework:** Software Architecture, Software Engineering, Human-Computer Interaction, Data Structures
